

Dear Friend of D-Feet Cancer,

D-Feet Cancer The Dalton Fox Foundation is a 501(c)(3) nonprofit organization, which started in September 2021 and quickly hit the ground running. We help discover targeted therapies and treatments for Ewing Sarcoma, a pediatric bone cancer, through increased awareness and charitable funding.

Dalton Fox was a fun-loving, active, and curious 12-year-old from Virginia Beach who was a friend to all animals. Dalton courageously fought his own battle with this terrible disease from 2018 until May 2021, when the medicine and science that exist today could not save his life. Even during his darkest days, Dalton never failed to make someone else laugh or smile with his quick wit and sense of humor.

Dalton's legacy lives on through his loving family, close friends, and D-Feet Cancer. While 12 years is not nearly long enough for his time here on earth, his impact will be everlasting.

How Can You Help?

D-Feet Cancer has planned multiple events for 2022, including Dalton's Dash, a 5K Walk / Run (May 21), a Golf Tournament and Silent Auction at Redwing Golf Course (October 14) and an Oyster Roast (November).

We kindly ask you to consider donating an item(s) or experience to be auctioned. Event sponsorships are also available and much appreciated.

Please see the included Donation Response and Sponsorship forms with return envelope and return either by mail to 2504 Early Court, Virginia Beach, VA 23454 or via email to info@Dfeetcancer.org. All contributions are tax deductible, and 100% of the funds raised by D-Feet Cancer directly support critical Ewing Sarcoma research.

Additionally, if you would like to come alongside us and #TeamDalton in the fight against Ewing Sarcoma, we would welcome your volunteer presence at any of our events. If you're interested in volunteering, please contact Kim Henson (info@Dfeetcancer.org).

Why Are We Doing This?

In the United States, less than 4% of federal funding goes towards pediatric cancer research, yet approximately 1 in 285 children will develop cancer before the age of 20. On average, 250 cases of Ewing Sarcoma are diagnosed each year in the US, and 30-40% of those diagnosed will not survive more than 5 years.

The cancer treatments that are used today for those with Ewing Sarcoma were developed as early as 1959 and there is still not an established treatment plan for recurrent Ewing Sarcoma. We kindly ask you to help us fund the researchers and doctors so they can find targeted therapies and treatments for those fighting now and those who have not yet begun to fight.

Thank you for your consideration and we look forward to hearing from you!

Julie Faneca
